# INDIAN CREEK FARM

The Home of Youngstown's Better Milk

Concluding the article on building strong teeth in children with raw milk written by E. Sprawson who is Director of Dental Studies at the London Dental School.

"Mr. Sprawson suggests that boiling or pasteurizing milk alters part of the vitamin content, so as to render enamel less resistant to caries. Whenever a child is hand fed, unless raw milk is given, there is necessarily an unnatural balance of vitamins and possibly other elements in its food. If raw milk forms part of the diet from birth, so long as it is continued all enamel formed has some immunity to dental caries. If it is not begun until later, erupted but incompletely formed teeth may be simply altered, though in lesser degree. It is problematic whether fully formed teeth can be influenced."

"If raw milk is not begun till the third or fourth year, protection is afforded to the deciduous teeth and to the permanent teeth. The converse is also true. If raw milk is taken for only two and one-half or three years after birth the deciduous teeth are protected, but little if any protection is afforded to the permanent teeth. For ideal dental development in man, Mr. Sprawson holds that raw milk should form part of the daily food till the age of 14 years, but because of the danger of tuberculosis the milk should be from tuberculin-tested cattle."

The highest quality milk obtainable is produced by the most up-to-date methods at our Indian Creek Farm. Our cows are tested for and immunized against every known disease to cattle. Our milk is clean, safe milk.

Those Precious Vitamins in

# EGGOL

Build Up Resistance—Are Reconstructive

Yes, Eggol is better than *plain* Cod Liver Oil—this fine egg-emulsion is Pure Cod Liver Oil in minute particles, the oil emulsified by machine with fresh egg yolks, and mildly-flavored. This makes for better assimilation and eliminates any gastric re-action. Made fresh—we make it—twelve ounce bottles.  
*It Is So Pleasant To Take*

## WHITE'S DRUG STORES

*Dependable Prescription Druggists*

# VITAMINIZED CHOCOLATE IS

A COMBINATION of vegetables and milk. Each glass of Vitaminized Chocolate contains the food value of a glass of milk plus two tablespoonsfull of raw vegetables.

Vitaminized Chocolate dairy drink has 20 to 30% more calories than are found in whole milk.

## The President's Page

We have started on the last lap of the year; only three more meetings, one scientific, one business, one public health, then a new group of officers and the old Society will forge ahead with renewed vigor and enthusiasm.

The outstanding event to come is undoubtedly the Public Health meeting, to be held the evening of December 15th at the Stambaugh Auditorium. It is none too soon to begin to talk this up among our friends and patients so that everyone will be informed of the date, hour, speaker and subject. It has been suggested that a personal invitation be written to those who might be interested, by any of the members who would care to do so. We should have a big turnout.

On December 20th comes the annual meeting, at which time the election of officers will take place. I urge that thought and consideration be given this matter, as this year it will be necessary to elect a President, Vice-President, President-elect, Secretary, Treasurer, Censor, a Delegate to the State Association, and two Alternates, all of whom will become members of the Council. Select your candidate now instead of the night of the election.

For our next meeting, November 22nd, after the scientific program, I am asking your indulgence in a short business session. As you know the annual dues become payable December 1st. In examining into our finances we find that our anticipated program can be continued temporarily on a lessened income, so at the last meeting of Council a proposal was passed that the dues be reduced one-third—that is from fifteen to ten dollars for the year 1933, and that this action be reported to the Society at its next meeting for approval or disapproval.

Those who have not read the editorial in this month's State Journal, "Essentials in Organization", do so; it is interesting.

A. E. BRANT.

## EDITORIAL

The organized medical profession has always felt constrained to avoid any appearance of entering into politics, as that term is commonly understood and defined. This policy appears to us to be merely another of those inheritances which we should promptly discard. We will agree that it is not within our province to hold political meetings and to favor the cause of any one candidate for office, and also that we should not, en masse, declare ourselves for any recognized party. And, inasmuch as any suggestion that we depart from our previous stagnation has always drawn fire from some of the older members of our profession, we apologize in advance but ask of them that they view the situation with fairness.

The medical profession includes, within its ranks, many a highly educated and distinguished American. These men, through their personal training and attainments, are perhaps better able to survey and analyze a situation than are their non-medical fellows. They read incessantly and are well-informed upon local and national affairs. They are not as a rule biased, and race, religion, and social status mean but little to them. They have a well-rounded experience amongst all classes and peoples, and should be qualified to direct public thought and occasionally to point the way.

We are impressed that it is high time for persons of thought, culture and education to go out of their way to interest themselves in the destiny of our nation and to fearlessly express their analysis whenever called upon to do so. This seems to be the only means for the eradication of those whose holding of public office is merely a means toward a personal end. The Ship of State is indeed obstructed by the barnacles which cling to her sides, and plans for a thorough scouring should be prosecuted. Those who have listened to the radio during the past two months must have been impressed that amongst other things which America needs is a wide-spread epidemic of tongue-tie.

And particularly when there arise problems concerning public health we should no longer remain silent, for from whom else can the voter expect sound advice? We should have a voice in all matters which pertain to health administration, as the lawyers should be consulted in matters of law, and we should allow no group of selfish politicians to dictate to us in health matters. We have no axes to grind and we seek no personal favors, but we should allow no long-winded orator to cry us down, and we should fear no publicity which such person would perhaps give us. Fear of public opinion has always handicapped our altruistic efforts and we should fear it never more.

Because our municipalities include divisions of health, and because our school-boards have their medical departments, are all the more reasons why some courageous and clear-thinking physician should be included amongst the City Councilmen and upon the Board of Education, to offer advice upon whatever project has to do with health. We will not be invited to place names in nomination,—indeed we may be discouraged—but my idea is that we should very definitely push ourselves into such places. Resistance will be offered, but through co-ordinated effort it may be overcome. Organized groups in politics will welcome no one whose purpose it is to merely serve without promise of monetary return for service.

Annual Business Meeting and Election of Officers  
Tuesday Evening—December 20th

## Secretary's Report

DR. W. M. SKIPP

On October 6th, 1932, our society was host to the Union Medical Association. This was the best attended meeting in the history of this association. There were some one hundred and fifty doctors present at the afternoon session which was held at the Elk's Club. Papers presented at the afternoon session, were by Dr. Armin Elsaesser on "Malignancy of the Thyroid", discussed by Dr. F. W. McNamara; Dr. John Heberding, on "X-ray Diagnosis of Gall Bladder Disease"; Dr. O. D. Hudnut, on "Causes of Increased Density in the Upper Third of the Lung"; Dr. E. C. Baker, on "X-ray Findings in Low Back Conditions". These papers were discussed by Dr. M. H. Bachman, Dr. S. J. Tamarkin, and Dr. J. A. Heeley. Dr. R. W. Scott, Professor of Medicine, Western Reserve University, Cleveland, Ohio, presented a most enlightening paper on "Modern Concepts in the Management of Certain Types of Heart Disease". His paper was discussed by Drs. J. G. Brody and W. H. Bunn. The meeting was then transferred to the Youngstown Club for dinner, followed by an address by Dr. Thomas McCrae on "Methods in Diagnosis". The evening session was attended by three hundred local and visiting doctors.

Council meeting October 14th, 1932, when routine business was attended to. This was the first meeting of our enlarged Council, adding Dr. J. L. Fisher, Dr. P. J. Fuzy, and Dr. J. Rosenfeld.

Dr. O. W. Haulman has returned to work. We all join in welcoming him back. This office extends sympathy to our member Dr. W. Z. Baker, who just lost his father, Dr. D. W. Baker.

The following is a list of doctors who attended the Inter-state Post Graduate Meeting at Indianapolis, Indiana, October 24th to the 28th, 1932. Dr. Morris Deitchman, Dr. Horace Mathay, Dr. Herman Zeve, Dr. D. B. Phillips, Dr. W. E. Ranz, Dr. C. D. Hauser, Dr. C. H. Beight, Dr. W. B. Turner, Dr. W. K. Allsop, Dr. S. H. Sedwitz, Dr. J. Rosenfeld, Dr. F. W. McNamara, Dr. J. C. Speck, Dr. Nagel of Girard, Ohio, Dr. L. G. Coe, Dr. B. B. McElhanev and Dr. Wm. M. Skipp.

The recently revised Constitution and By-Laws have been approved by the Council of the State Medical Association.

At the Convocation of the American College of Surgeons in St. Louis in October, Dr. John U. Buchanan and Dr. J. B. Nelson were elected Fellows of the College.

Dr. E. C. Goldcamp was elected a Fellow of the American Academy of Otolaryngology at the Montreal meeting in September.

Dr. David Hauser has moved from Rayen Ave., to 266 Lincoln Ave.

## Medical Gleanings

On the outside back cover of this issue you will observe a notice regarding Health Examinations. This page has a solid line border so that it can be easily removed. Those who are engaged in this form of preventive medicine are urged to post this sign in their offices to attract patients' attention to the service. Possibly we weary you with so much talk of preventive methods, but there are more of these to come, and if you like them we would appreciate your suggestions.

Next month the Bulletin Committee is planning a special Christmas number which will contain a gift for each member. No details now, as we wish to surprise you. Are you listenin'?

And don't forget the Society's Christmas gift to Youngstown. The Annual Public Meeting at the Stambaugh Auditorium which was so auspiciously begun last year. A distinguished speaker, an important message—don't miss the opportunity to invite your friends to be there.

Those who attended the Sixth District Meeting last month (which means nearly everybody) were very proud of our Youngstown men who appeared on the program. Not to detract from Dr. McCrae nor Dr. Scott who surpassed every expectation, we still feel that the local part of the program was great. Dr.

Elsaesser's paper on "Malignancy of the Thyroid" was excellent and presented an imposing series of cases which justified his conclusions and demonstrated the breadth of his experience in this field.

The X-ray Symposium was carried out with snap and precision which never permitted the interest to lag. Dr. Heberding presented the latest developments in X-ray study of the gall bladder. Drs. Baker and Hudnut surprised us with their rapid-fire delivery without notes, which sounded as if they were instructors who had lectured on their subjects every day in the class room. The discussion by Drs. Bachman and Tamarkin really added much to the sum total of the facts presented and demonstrated the value of prepared discussion.

There is another thing, not appearing on the surface, which was a strong contributing factor to the success of this meeting. That is the smooth-working organization which this Society now has. Dr. Brant was responsible for the local arrangements for this meeting, and with his corps of assistants every detail was worked out beforehand. For several years this Society has been putting across large meetings and accumulating experience, so that the members of the various committees know exactly what is expected of them and do it. It takes time and effort, and these have been cheerfully given. We doubt if ever there has been better cooperation between committees, or more enthusiastic support of Society affairs than there is at present.

## Loading It On the Doctors

The Oakland County Board of Supervisors is to decide within a few days how poor relief will be dispensed. Regardless of what decision is made, one factor of the present situation cannot continue. That is the policy of making no provision for medical attention for indigents who may become ill, and depending upon the local doctors to dispense relief to the sick at their own expense.

It is neither fair, right, nor good sound judgment to throw this burden back on to the doctors in the various communities and expect them to carry the load then pointing to the "saving" achieved.

There is no need to dwell on the services performed by the physician in his community. In the best of times and under the happiest of circumstances his is still the most arduous, the most exacting and most soul-trying of professions. He knows no genuine rest, unless he runs away from his patients for a short period each year, and few of them do. Most of us go to bed at night knowing at about what time we will get up and how many hours sleep we will get, but the doctor never does. At all times, in all kinds of weather, he is at our beck and call,—little better than a modern slave. For his toil he gets this:—that if the patient dies, Dr. So-and-so was his doctor, and if the patient lives, it was Nature that performed the cure. Most doctors themselves die before their time.

Further it is also probable that no profession has been harder hit financially than the doctors. It is proverbial that "after the cure the doctor is forgotten," that even in good times the doctor is the last man paid. Now in bad times, it is even worse. And two things are to be remarked. First, it is precisely in those sections of the County where the industrial populations live, that the physicians are having the hardest time, simply because so great a proportion of the population need every penny they can scrape up for food. The doctors have fewer paying patients, and the general health in these poorer sections is unquestionably at a lower mark than in the more prosperous areas, due to lowered resistance through undernourishment and neglect. A second fact to bear in mind is that in throwing this burden back on the doctors, a penalty is placed on humanity and kindness, since the more humane the physician the greater is the weight he will be called upon to carry. The rare doctor who may assume a "hard-boiled" attitude travels a happier, easier road than his colleagues whose instincts will not let them turn a deaf ear to suffering.

Medical care is an essential part of life, just as are food and shelter. Indeed, the indigents who happen to fall ill are in the greatest need of all. Tossing the problems of these people back into the laps of our local doctors is not a "saving" in any sense—it is merely a start toward undermining the most important profession in the world.—*Editorial in the Farmington Enterprise, Oakland County, Michigan.*

THE OLD MINUTES—VII.  
MISS DOCTOR BETTS

DR. HELEN BETTS

Youngstown, Ohio, March 5th, 1873.

. . . The society called to order by Dr. Brooke. Dr. McCurdy moved that Dr. Miss Betts be admitted as a member of the society. The motion was ruled out of order and the question referred to the censors to be reported at our next regular meeting . . .

Thus we find, four months after this society was organized, that a member of the fair and weaker sex was knocking for admittance. In due time she was elected to membership, and for about three years thereafter she was one of the most active members of the society. Hardly a meeting where her name is not mentioned as taking part in discussions or reading papers. We have a lurking suspicion that she was, to a certain extent, a persona non grata, at least with some of the members. There is little to substantiate this, but to us there is a hidden sneer in the way she is variously referred to as Miss Betts, Dr. Miss Betts, Miss Dr. Betts, and never as Doctor Betts. We have also heard some stories of ribald jokes played on her by the masculine members of the profession. But that was almost to be expected in a day when a woman physician was an avis rara anywhere, particularly in a small community.

The last reference made to Dr. Betts in the minutes is late in 1875, after which date we lose track of her. She has for some time intrigued us and finally

we were able to piece together information which was obtained from various sources and the following sketchy biography is the result.

Dr. Helen Betts was born in Vienna, Trumbull County, about 1845, (the exact date could not be obtained). She was the daughter of Reverend Xenophon and Jane Betts. Her father was a Presbyterian minister who came from Connecticut and remained in Vienna for twenty-two years until his death. Vienna at this time was a thriving mining town which boasted not only an Academy, but also some fifty saloons. Miss Helen received her primary education in the Vienna public schools and also attended the "Academy" on the green, which is now extinct. After graduation Miss Betts taught public school for two or three years. Where she received her medical education we have not found out, nor have we the exact date when she began to practice medicine. We do know, however, that she began in Youngstown with offices on the corner of Walnut and Federal Streets, sharing office rooms with Dr. Woodbridge. A photograph taken about this time shows her as a rather good looking young woman. After practicing here for several years she removed to a suburb of Boston where for several years she conducted a successful general practice. It is evident that Dr. Betts had the restlessness of a true pioneer, because she left this practice to go abroad to study ophthalmology and otolaryngology. After three years of study abroad she returned to Boston and limited her work to the above specialties. We understand that she was a rather successful specialist, doing her own surgery and good surgery, at that. About 1900 she had to leave Boston and go to San Jose, California on account of failing health. She continued to practice her specialty in California until 1907, where she died after an unknown protracted illness. In accordance with her last wish she was cremated and her ashes brought to Vienna where they were scattered over the graves of her parents.

We feel like apologizing for these very sketchy notes with their indefinite dates, but this is all the information we could elicit from relatives who themselves are well along in years and have no accurate record of dates and facts. The people who knew her personally were quite young at the time Dr. Betts was here. From their description she was a fine looking woman of much grace and dignity, stately in carriage and a charming conversationalist. She was somewhat bookish in her habits and was widely read in medicine and general literature. The photograph reproduced here was taken in Boston when she was in her fifties and, without being sentimental, one can read kindness, poise, and refinement in this face. Although doing what was then considered a man's job, there was nothing unfeminine about her. This society may be proud of having had Dr. Betts, a true pioneer in medicine as a member.

There is a small headstone, about three inches square, in the Vienna cemetery which marks the final resting place of Dr. Betts. It is in the first lane off the main road, a short distance from the chapel, and next to a large stone of Reverend Xenophon Betts.

—L. S. D.

(Continued From Page Four)

## EDITORIAL.

These are facts and must be faced, and faced without fear and blushing, but with unlimited courage.

We are all Americans, and we have the welfare of our great nation at heart. We, as physicians, should cease assuming a false modesty and should take up what is our duty to our city, our State and our Nation. And "politics" will not have to lower its standards in order to include loyal and courageous citizens whose educational attainments and whose keen judgement most aptly fit them for public office. Many of our profession answered the call to colors in war-time. Let us have the courage to do so in peace-time.

A. W. T.

The St. Elizabeth's Hospital Auxiliary has become an invaluable aid to the Institution by assuming the responsibility of satisfying the linen needs of the Hospital which previously had been one of the greatest demands to be constantly met. They have not only given time and thought to this one problem but have also generously donated their personal assistance in the preparation of all the surgical supplies.

### MUNICIPAL HOSPITAL

Scarlet fever cases .....	3
Syphilis — positive .....	5
Syphilis — Negative .....	9
<hr/>	
Total .....	17

Two months reports are being submitted, as the September report was too late for publication.

It will be noticed that there was a very sharp rise in the number of cases in September as compared with August.

The October report shows a very sharp rise in the number of cases of Scarlet fever. Extreme care should be used in preventing the spread of this disease. Prompt reporting of all cases or suspected cases will help greatly in the prevention of the spread of this disease.

The Municipal Hospital cases remain low in number. Many cases of Scarlet fever should be sent in to the Municipal Hospital for treatment as this would greatly assist in the prevention of the spread of this disease as well as the development of serious after effects. The physician can greatly assist in this matter.

C. H. BEIGHT, M. D.

## CORRESPONDENCE

August 17, 1932

The Mahoning County Medical Society Bulletin,  
Youngstown, Ohio.

Dear Editor:

I want to thank you and the members of the Mahoning County Medical Society for sending me your Bulletin. I enjoy reading it very much from the Editorial Page, the President's Page, the Secretary's Report and on through to S. Q. Laypius Observes. I do appreciate most of all your articles dealing with the fundamentals of medicine. Many County as well as State and National Medical Societies have been fed up on too much scientific medicine during the past few years of inflation.

Bulletins like yours in each County Medical Society would do a great deal of good for future medicine by calling the attention of the physicians to the fact that we are dealing with human beings as well as treating their diseases. The psychology of the race is constantly changing, and as you well express it in your Bulletin, it is necessary for the physician to change his methods to conform with the psychology of the patient and his financial status.

In my judgement yours is the best Bulletin it is my privilege to read.

With my very best wishes for your continued success, I am,

Very truly yours,

J. P. DeWITT.

Canton, Ohio.

## Dr. John S. Cross

1873 - 1932

Dr. Cross was one of this city's most prominent physicians, having practiced in Youngstown for twenty-seven years. During this time he served as coroner for eight years. Death came suddenly while actively engaged in the practice of his profession.

## Dr. Daniel W. Baker

1862 - 1932

Dr. Baker was a well known and highly respected physician in this city for thirty-seven years. He held the appointment of county jail physician for thirty years until ill health forced his retirement. His kindly personality will long be remembered by his many friends and patients.

## CONTEMPORARY REVIEW

It is imperative at present that every county medical society impress its members with the necessity for strong medical organization. Whole-hearted cooperation in the activities of local, state and national units of medical organization should be urged. Every eligible physician in every county should be shown the benefits which he would derive through membership in his county medical society and the State Association. Likewise, every physician should be impressed with the obligation he owes himself and his profession in giving his active support to the organized efforts of the medical profession.

Whether medical organization in Ohio will be able to meet its responsibilities and duplicate its successes of the past in safeguarding scientific medicine, preserving the present standards of medical practice, and promoting the best interests of the individual physician depends largely on the other factors in successful organization, namely: (1) The active, united and enthusiastic interest of every member in the activities and program of medical organization, and, (2) the enlistment of every eligible physician in the state in the cause of organized medicine.—*Ohio State Medical Journal.*

The Toledo Academy of Medicine has inaugurated a series of scientific exhibits under the direction of Dr. Frank C. Clifford, chairman, Dr. J. Lester Kobacker, Dr. Nelson D. Morris, Dr. Carll S. Mundy, Dr. A. H. Schade, and Dr. R. C. Young. The exhibits are located in rooms on the first floor of the Academy building so that members can visit them following meetings of the Academy and its special sections. The display will be changed each month. Dr. E. B. Gillette, president of the Academy, was the originator of the idea which has proved most popular among the membership.—*Bulletin of The Toledo Academy of Medicine.*

CLEVELAND ACADEMY SPONSORS POST-GRADUATE LECTURES

The Cleveland Academy of Medicine has initiated a post-graduate course in "Respiratory Disease" in the form of a series of 24 Friday afternoon lectures at the Academy Building. Dr. H. V. Paryzek, Councilor of the Fifth District, is chairman of the committee in charge of the lectures and demonstrations. The first four lectures were given by Dr. G. S. Shibley, associate professor of medicine, Western Reserve University, on October 7, 14, 21 and 28, on "The Common Cold, Influenza, Lobar Pneumonia and Broncho-Pneumonia." The program for the remaining lectures follows:

- November 4 and 11—Abscess of Lung and Bronchiectasis, Dr. Richard Dexter.
- November 18—New Growths of the Lung and Bronchi, Dr. M. A. Blankenhorn.
- December 2—X-ray Diagnosis and Treatment of Pulmonary Malignancy, Dr. David Steele.
- December 9 and 16—Pathology of Pulmonary Tuberculosis, Dr. J. C. Placak.
- January 13—Laboratory Diagnosis of Pulmonary Tuberculosis, Dr. R. H. Browning.
- January 20—Differential Diagnosis of Pulmonary Tuberculosis, Dr. H. H. Brittingham.
- January 27—General Treatment of Pulmonary Tuberculosis, Dr. J. C. Placak.
- February 3 and 10—Pneumothorax and Oleothorax, Dr. R. C. McKay.
- February 17 and 24—Surgical Treatment of Pulmonary Tuberculosis, Dr. S. O. Freedlander.

—Bulletin of the Cleveland Academy of Medicine

FROM DR. McCRAE

Editor of The Vindicator, Sir:

I wish to express my appreciation of your editorial, "Lives of Great Men—" in the issue of your paper on October 5th. This is not on account of the kind things you say about myself, far beyond my deserts but still very pleasant to hear, but especially for the tribute you pay to the memory of my master, William Osler, and to his ideals. You have given a beautiful statement of what we should strive for and how much the affairs of the spirit may mean. Probably no man ever influenced the members of the medical profession as did William Osler. The question as to whether medical organizations would have wished him to devote more attention to his economic welfare than to the development of medicine is a particularly happy illustration.

Every member of the profession owes you many thanks for stating so clearly and in such appropriate words the ideals which we should keep ever before us. I wish to add mine to the many which I am sure you have already received.

With very kind regards,

Yours sincerely,

THOMAS McCRAE.

(Dr. McCrae, whom Sir William Osler brought from Toronto to Johns Hopkins University in 1904, has been Magee professor of medicine and internal medicine at Jefferson Medical School, Philadelphia, since 1912. He addressed the United Medical Association here last Thursday on "Methods of Diagnosis." His letter to The Vindicator was written in longhand.)

Really Get ◆**

**Not very much:** (1) When the baby is bundled to protect against weather or (2) when shaded to protect against glare or (3) when the sun does not shine for days at a time. Mead's 10 D Cod Liver Oil with Viosterol offers protection against rickets 365¼ days in the year, in measurable potency and in controllable dosage. *Use the sun, too.*
