FOR RELEASE:

IMMEDIATE

Mailed May 7, 1987

OK

YOUNGSTOWN, Ohio - Dr. Julian M. Earls, chief of the Health, Safety and Security Division at NASA's Lewis Research Center, will address the participants in Youngstown State University's Career Beginnings Program at 6:30 p.m. Wednesday, May 13, in the Chestnut Room of Kilcawley Center.

Career Beginnings is an experimental, two-year program funded by a grant from the Commonwealth Fund by Brandeis University's Center for Human Resources and coordinated by YSU.

A total of 104 juniors from Youngstown city high schools participated in this year's program, which placed students in summer jobs and paired each with a "mentor" from the business community, who provided encouragement and guidance. This college-business initiative is aimed at helping tenacious young people realize their potential and the importance of education.

The students and their mentors will join other city school representatives at the banquet. Dr. Earls' 7:30 p.m. address will be on the topic, "Success Is a Journey, Not a Destination." An awards ceremony will follow at 8 p.m. The welcome will be by Peter Fetterolf of Ohio Edison, Career Beginnings business chairman.

At the Lewis Research Center, Dr. Earls manages such programs as occupational medicine, environmental health, radiation physics, industrial safety, physical security and computer security.

He holds a Bachelor of Science degree in physics from Norfolk State University, a master of science in Physics from the University of Rochester, and a masters and doctoral degrees from the University of Michigan. He is also a graduate of the Harvard Graduate School of Business.

He is adjunct professor at Capital University, Columbus, and Cuyahoga Community College, Cleveland.
